## SBA National Resource Center: 800-621-3141

## Level of SB Function

Spine Level	Possible Muscle Function	Possible Orthopaedic Concerns	Possible Orthotics Needed	Possible Equipment for Functional Mobility	Possible Cognition, Executive Function
T6-9 T9-12 L1	Upper trunk (abdominals) No LE function Abdominals + paraspinals = some pelvic control Complete trunk function Lower trunk (abdominals) Hip flexors (weak) 2/5	Kyphoscoliosis, Lumbar hyperlordosis Coxa valga-hip dislocation Decreased bone density Fractures <b>Contractures:</b> Hip: abduction, flexion, external rotation Knee: flexion, extension Foot: heelcord, clubfoot	TLSO Night splints: body, hip abduction, KAF, AF <b>Early:</b> Parapodium, (10 months of age and up to 2 years) <b>Later:</b> stander, RGO, HKAFO, KAFO <b>Caution:</b> Preserve UE function with level transfers, stable seated posture. Maintain strength + flexibility of shoulders/ arms.	Community: Wheelchair/ wheelchair cushion, transfer board Home: Walker/Crutches (for household or exercise walking), Raised, padded commode seat. Bath bench Mirror for skin checks Stander: 1 hour/day minimum starting at 10-12 months of age. Driving with hand controls Learn public transportation	Executive function impairments can impact educational, social and self help skills. Cognitive function can vary with the degree of hydrocephalus number of shunt infections, and the involvement of the nervous system. Function may not be related to level of lesion or ability to walk. Support early assessment of attention difficulties, sensorimotor integration, visual perception, visual motor ability, psychosocial development in addition to fine/gross motor +
L2 L3	Hip flexors 3/5 Hip adductors 3/5 Knee extensors 3/5	Scoliosis, Overuse of UE's Lumbar hyperlordosis Hip subluxation Coxa valga-hip dislocation Decreased bone density Fractures <b>Contractures:</b> <b>Hip:</b> flexion <b>Knee:</b> flexion, extension <b>Foot:</b> Heelcord, clubfoot	Night hip abduction splint <b>Early:</b> Parapodium (10 months of age up to 2 years) <b>Later:</b> Stander, RGO, HKAFO, KAFO (if quads are less than 3/5 strength) L3-5 May be temporarily addressed by twister cables or derotations straps	Community: wheelchair + cushion Home: Stander: 1 hour/ day minimum Early: may use walker or crutches Later: wheelchair in home	communication ability. Independent living: Occupational Therapy Goals: Basic activities of daily living (BADLs) or bathing, dressing, grooming, bowel/ bladder program, skin care, moving/transportation in your home/community. Instrumental activities of daily living (IADLs). Shopping, meal preparation, use of home appliances. Early learning/practice of all ADLs is vital. Physical/ Occupational Therapy/ Gross Motor Goals: 1. Achieve/maintain full ROM. 2. Achieve/maintain full strength in intact muscles for ADL's and mobility. 3. Locomotion activities including ambulation skills (falling down, getting up), walk on various terrains, transfer to various surfaces (chair, car, bed). 4. Achieve maximal sitting tolerance with skin intact. 5. Attain cardiovascular endurance for function. 6. Ability to perform or direct care including care + maintenance of orthotics + equipment. 7. Obtain recommendations re: home modifications. 8. Document medical appts, follow up, surgical history. Transition to adult self care begins at birth
L4 L5	Medial knee flexors 3/5 Ankle dorsiflexor 3/5 Hip abductors (weak) 2/5 Lateral knee flexors 3/5 Ankle invertors 3/5 Long toe extensors (palpate at ankle)	Lumbar hyperlordosis Coxa valga <b>Contractures:</b> <b>Hip:</b> flexion <b>Knee:</b> flexion (avoid crouch gait) <b>Foot:</b> Progressive calcaneus (tight heelcord) Calcaneovalgus Equinovarus—Clubfoot Paralytic Vertical Talus	Night hip abduction splint <b>Early:</b> Parapodium <b>Later:</b> RGO, HKAFO, KAFO, AFO (L3-L4 CCAFO) L4-5 Toeing in gait and weak gluteals may be temporarily addressed by twister cables and/or rotation straps Consider shunt malfunction and/or tethered cord	<b>Community:</b> wheelchair, walker, crutches, cane Strong medial hamstring needed for community gait <b>Home:</b> early on may need no support Later: may require UE support	
S1 S2	Hip abductors 3/5 Hip extensors (weak) 2/5 Plantar flexors (weak) 2/5 Hip extensors 4/5 Plantar flexors 3/5 Toe flexors 3/5	Monitor hips closely Contractures: Foot: Calcaneus (tight heelcord) Calcaneovalgus Pes Cavus, Clubfoot Toe clawing (flexion) Heel/foot ulcers	AFO, SMO (supra malleolar orthotics), shoe inserts or no orthotics S1-2 Toeing out gait Use of crutches may decrease the valgus forces at the knee and also improve endurance	Community: walking with walker, crutches, cane. Gluteus lurch/ Trendelenburg gait aided by cane or crutches. Long distance alternative: lite weight wheelchair, bike, scooter Home: May need no support.	
S <sub>3-5</sub> Shunt ma	All muscle activity + bowel/ bladder function may be normal	None : May cause deterioration of da	None or shoe inserts ily living skills, progressive wea	None kness, muscle contractures	at dirtn.
or orthopaedic deformities of the legs, scoliosis, back pain at the site of closure, deterioration of gait, changes in bowel and/or bladder function.
